

FLEXPO™ maverick II20™

graphic fabric™ installation

1: The RasterPrint™ graphic attaches to the structure with Velcro®. Be sure that the hook Velcro® surfaces on the structure are all facing the front of the unit. This is especially important with the curved pieces as, unlike the straight pieces, they cannot be rotated once assembled. Start the installation by taking off the counter bars. Then start installing your graphic panel in the upper corner as shown and work your way across, then down the sides keeping the graphic taut as you go. Attach the bottom edge last.

2: Install the center graphic panels in the same manner.

3: Install the right graphic panel in the same manner.

4: Install the counter bars and then attach RasterPrint™ graphic panel to the counters in the same manner.
